The Neurobiology of Autism (The Johns Hopkins Series in Psychiatry and Neuroscience)

The Neurobiology of Autism (The Johns Hopkins Series in Psychiatry and Neuroscience)

In the decade since the first edition of *The Neurobiology of Autism* was published, research has revealed valuable new information about the nature and origins of autism, including genetics and abnormalities in such neurotransmitters as acetylcholine and serotonin. For this long-anticipated new edition, neurologists Margaret L. Bauman and Thomas L. Kemper bring together leading researchers and clinicians to present the most current scientific knowledge and theories about autism. The contributors cover genetics, imaging studies, physiology, neuroanatomy and neurochemistry, immunology, brain function, the epidemiology of the disease, and related disorders. Thoroughly updated, *The Neurobiology of Autism* remains the best single-volume work on the wide array of research being conducted into the causes, characteristics, and treatment of autism.

Contributors: George M. Anderson, Yale Child Study Center; Tara L. Arndt, University of Rochester Medical Center (URMC); Trang Au, University of Massachusetts Medical School (UMMC); Jocelyne Bachevalier, University of Texas Health Science Center; Irina N.
