Convergent Architecture: Building Model-Driven J2EE Systems with UML (OMG) Richard Hubert

The only complete technical guide to building integrated business systems using the convergent architecture approach

In his groundbreaking *Business Engineering with Object Technology* (0-471-04521-7), David Taylor introduced the concept of convergent architecture (CA), a framework for building the business design directly into the software systems that support it. Now, in this important follow-up to that 1995 classic, expert Richard Hubert provides systems developers and architects with their first complete blueprint for building integrated CA business systems using the hottest technologies, including Enterprise JavaBeans, XML, UML, Rational Rose, and others. Following a detailed introduction to the elements of CA, he walks readers through the entire CA design and implementation process, using examples in Java and EJB to illustrate key points.

Companion Website provides hands-on tutorials, links to related tool sites, and updates to the CA methodology.
