Advanced Magnetohydrodynamics J. P. Goedbloed, Rony Keppens, Stefaan Poedts

Following on from the companion volume Principles of Magnetohydrodynamics, this textbook analyzes the applications of plasma physics to thermonuclear fusion and plasma astrophysics from the single viewpoint of MHD. This approach turns out to be ever more powerful when applied to streaming plasmas (the vast majority of visible matter in the Universe), toroidal plasmas (the most promising approach to fusion energy), and nonlinear dynamics (where it all comes together with modern computational techniques and extreme transonic and relativistic plasma flows). The textbook interweaves theory and explicit calculations of waves and instabilities of streaming plasmas in complex magnetic geometries. It is ideally suited to advanced undergraduate and graduate courses in plasma physics and astrophysics.

From reader reviews:

Lauren Joseph:

The book Advanced Magnetohydrodynamics can give more knowledge and information about everything you want. So just why must we leave the good thing like a book Advanced Magnetohydrodynamics? A number of you have a different opinion about publication. But one aim that book can give many data for us. It is absolutely correct. Right now, try to closer along with your book. Knowledge or data that you take for that, you can give for each other; you may share all of these. Book Advanced Magnetohydrodynamics has simple shape nevertheless, you know: it has great and big function for you. You can search the enormous world by wide open and read a e-book. So it is very wonderful.

Joel Connolly:

In this 21st century, people become competitive in every single way.
